What is VIN Etching? It is simply using the VIN Etching Kit shown above and putting your car's VIN Number (Vehicle Identification Number) which is found in the Windshield area on the Drivers side of every car, on all of your glass windows in the vehicle. It takes only minutes and you or any one in your family over grade school age can do it in about 5 minutes. You can do three or four other cars at the same time easily.

This Etched VIN number then permanently identifies all of the glass windows in this car with the vehicle and makes it Very Hard for thieves to sell your car to a "chop shop" or get rid of it by selling it to a third party, because the thief would usually have to replace all of the windows to do this and they don't have the time, money or want the possibility of being caught. So they simply move on to another car and leave yours alone. Police Departments and Insurance companies have all kinds of statistics showing that VIN Etching Reduces Car Theft by as much as 65% to 97% (Depending on what part of the country and on whom did the survey). In any event it is Definitely Proven that VIN Etching drastically reduces the chances of having your car stolen. The same statistics also Prove that cars actually stolen that have VIN Etching are Recovered 60% to 85% more often and returned to their owners than non VIN Etched cars. Since this is all True and can easily be proven by very accurate statistics compiled by several different agencies the insurance industry wants you to protect your car with VIN Etching.

This makes it very simple to do in just minutes. Don't you want this kind of protection? Right now is the time to do it.
